ISOCLIMA BALLISTIC GLASS

Transparent protection for law enforcement vehicles

Isoclima Specialty Glass develops ballistic-resistant glazing for patrol cars, police SUVs, K9 vehicles, tactical units and command fleets. These engineered window systems add protection at the glass while maintaining the visibility officers need.

What the glass does

Resists ballistic threats: Layered transparent armor is engineered to resist projectile penetration under the conditions of its specified ballistic test rating. Isoclima vehicle armor uses glass and polycarbonate layers.

Supports visibility and occupant protection: Isoclima emphasizes optical clarity and spall protection, which helps limit fragments on the protected side after an impact. Its law enforcement glazing also offers resistance to forced-entry attempts.

Supports fleet upgrades: Vehicle-specific options and aftermarket retrofit capability allow agencies to discuss upgrades for existing vehicles. Available fitment and installation requirements depend on the vehicle and selected system.

Match the protection to the mission

Contact RRTVS to discuss your vehicle year, make and model, the windows you want protected, and your operational needs. The exact threat rating, test documentation, coverage, window operation and installation requirements must be confirmed for the selected configuration. Ballistic-resistant glass is not protection against every threat.

Contact RRTVS for pricing, demos & questions
